

Petals Product description

Product 1: Sunflower Calendar

An interactive, customizable calendar designed to help children learn dates, days, and routines through hands-on engagement.

What is it?

The Sunflower Calendar is a complete learning system:

- A board with pre-marked weekdays (Sunday–Saturday)
- Number tags for dates
- Month tags
- Markers for “Today,” “Yesterday,” and “Tomorrow”

Children can remove and place tags on the board using Velcro, matching the actual calendar every month. It allows them to mark the current day, practice sequencing, and visually understand the concept of time.

Why It Works

- Hands-on learning: Kids actively manipulate numbers and markers
- Customizable and interactive: Supports daily routine building and independent learning
- Visual and tactile feedback: Engages multiple senses, supporting learners
- Supports early calendar skills: Understanding days, dates, and sequences

Who is it for?

- Children learning about time and routines
- Parents and caregivers looking for structured learning tools
- Therapists and educators supporting daily life skills

How It's Made

- 3D-printed number tags and markers for durability and tactile engagement
- Board and other components made for child-friendly use
- Fully customizable with Velcro for hands-on interaction

The Sunflower Calendar turns abstract concepts of time into playful, manageable, and engaging learning—helping children learn while having control and independence.

Product 2: Clicky-Clacky

A tactile sensory toy designed for focus, calm, and purposeful play.

What is it?

A sensory tool built with individual keyboard switches that create a satisfying, consistent click with every press—supporting safe, engaging, and non-overstimulating play.

Why It Works?

- Predictable tactile feedback
- Supports self-regulation and focus
- Builds fine motor skills
- Encourages cause-and-effect learning

Who is it for?

Children, sensory seekers, therapists, educators, and parents looking for meaningful, low-overstimulating tools.

Available Types

- Type 1: Cheese – playful and engaging
- Type 2: Sunflower – warm and calming

How It's Made?

Made using PLA (Polylactic Acid) through a 3D printing process. Each piece is printed individually and takes approximately 15–30 minutes to build. This is a bio-degradable plastic made using starches.

Small clicks that support focus, calm, and control.

Product 3: Spinner

A tactile focus tool designed to support movement, attention, and self-regulation.

What is it?

A fidget spinner with a carefully designed wheel that requires a deliberate push to rotate every time. This gives controlled, predictable motion—turning each spin into a satisfying sensory experience.

Why It Works?

- Encourages intentional, controlled movement
- Supports focus and attention through repetition
- Helps with stress, restlessness, and regulation
- Provides consistent tactile feedback with every spin

Who is it for?

Individuals, students, and anyone who benefits from movement-based focus tools.

How It's Made

Made using PLA (Polylactic Acid) through a 3D printing process. Each piece is printed individually and takes approximately 22 minutes to build.

Every spin is purposeful—helping small movements create big focus.

Product 4: Number Blocks

A tactile, educational tool designed to help children explore numbers, addition, and subtraction in a hands-on way.

What is it?

Number Blocks are colorful, stackable numbers made from PLA (Polylactic Acid) using 3D printing. They assist children with numerical operations within 10, making math interactive and visual.

Why It Works

- Supports early math skills through hands-on play
- Makes addition and subtraction concrete and visual
- Encourages stacking, sorting, and problem-solving
- Provides tactile feedback to engage multiple senses

Who is it for?

Young learners, children developing numeracy skills, educators, and parents seeking educational sensory tools.

How It's Made

- Printed individually using PLA (Polylactic Acid)
- Build time: approximately 4 hours 20 minutes
- Durable and safe for repeated use

Learning numbers has never been this colorful, tactile, and engaging.
